

Enterprise Network Diagram — ABC Startup Solutions

Prepared by: Charles Gabrielle Banagan | ITEP 414 - Week 2

Legend / Flow Summary

Internet → ISP Modem → Router → Firewall → Core Switch → distributed to Server, Printer, Wireless AP, and each department segment.

All department workstations connect to the Core Switch via structured CAT6 cabling through the patch panel (see Part 4: Network Inventory).

Wireless devices (laptops, mobile) connect via the Wireless Access Point, which is uplinked to the Core Switch.

Firewall enforces perimeter security between the Router and the internal LAN; VLAN segmentation isolates department traffic.

Reference layout — see README.md Part 5 note on producing the official Draw.io PNG/PDF export.
